## 2009 Electric Grinder

With no emissions and less noise and maintenance, the versatile DuraTech 2009 Electric Tub Grinder has unparalleled grinding power. A 400 hp soft start main drive motor and a 75 hp motor to power the hydraulic system are available in various voltages to fit your power grid specifications. The 2009 Electric has no problem keeping up and grinds at the same consistent rate as its diesel-powered counterpart. A PT Tech Torque limiter protects the motor and hammermill from overloads, jams and costly repairs. The stationary units are available as a skid unit, or a movable pintle hitch. The heavy duty hammermill, tilting tub for easy access and maintenance, governor controlled tub speed and hydraulic folding stacking conveyor are all benefits that will make a 2009 Electric Tub Grinder from DuraTech a profitable investment.
